Give Your Students the Critical-Thinking Skills to Comprehend and Analyze Real-World Science

Today's Science features thousands of original articles written by scientists and science journalists in easy-to-understand language, based on the most current peer-reviewed journal articles. The in-depth coverage spans important advances in biology, chemistry, environmental science, space, physics, and technology.

Applied Science in a Nutshell

An extensive backfile illustrates how one scientific advance leads to another; the stories focus on the questions scientists ask themselves and, in doing so, reinforce science educators' traditional emphasis on the scientific method.

Where Have All the Frogs Gone?

by Allie Gross | May 2019

According to an ancient Greek fable, once upon a time the frogs demanded that Zeus, the king of the gods on Mt. Olympus, give them a king of their own. Amused, Zeus sent them a log. At first the frogs were scared, but they quickly realized they could walk—or jump, as it were—all over King Log. So, they petitioned Zeus again to send them a “real king”! This time Zeus was less amused, so he sent them a heron that ate them all. Turns out he could have just as easily sent the frogs a deadly fungus called *Batrachochytrium dendrobatidis* (Bd).

Virus to Bacterium: Let's Just Be Friends

by Enrica Rodriguez | May 2019

...you'd normally expect the predator to be being, and consequently to be helpful to any of all food chain, the snake eats the bird and the snake ends up benefiting the worm. But in a more complicated, and predator-prey evolutionary changes, *Pseudomonas aeruginosa* bacterium that acts as a host to the virus P1, a study does the virus hurt or hurt more: the fact that the bacterium infects?

↑ Original Articles:

distilled from major scientific news sources and peer-reviewed journals, highlighting current science topics in easy-to-understand language—content students can trust

Plus—

- **Extensive backfile and 30,000+ embedded hyperlinks to related articles:** illustrating how one scientific advance leads to another
- **Pop-up glossary:** putting 7,000+ important science terms at students' fingertips, promoting science literacy
- **Discussion questions:** to encourage critical thinking about each article
- **Extensive biographies**
- **Science fair guide**
- **Searchable** by Common Core, national, state, provincial, IB, College Board AP, NGSS, and national STEM standards
- **Curriculum tools:** activities, assignments, and research tools that help students speak and write—and educators teach—about science
- **Rich resources:** thousands of editorial cartoons, video briefs, images, diagrams, and crossword puzzles
- **Dynamic citations:** in MLA, APA, and Chicago formats

Athena Demertzi: Investigating the Nature of Consciousness

May 2019

Print Download Share Save Read Aloud Glossary Links

Danny Gys/FNRS Reporters

"... by knowing more about the gradations of consciousness, we can engage in public discourse about animal rights, end-of-life options, life itself, and even the afterlife. In that respect, I find that the investigation of the profound experience of consciousness pertains to our daily lives in every possible way."

Athena Demertzi is a researcher in cognitive and clinical neuroscience at the University of Liège's GIGA Research Institute in Belgium. Born in Greece, Demertzi graduated from Greece's Aristotle University of Thessaloniki in
